Introduction

Input: RGB image

Output: Semantic segmentation

Self-driving applications

Efficiency

Accuracy

as high as possible

Inference Time

real-time

Model Size

low memory consumption

EDANet

EDANet

• Efficient Dense modules of Asymmetric convolution, the second proposed network.

EDA Module

- Point-wise convolution layer
- Dilated convolution
- Asymmetric convolution
- Dense connectivity

Asymmetric Convolution

• Factorize a standard 2D convolution kernel into two 1D convolution kernels.

•
$$\sum_{i=-M}^{M} \sum_{j=-N}^{N} W(i,j)I(x-i,y-j) = \sum_{i=-M}^{M} W_x(i) \left[\sum_{j=-N}^{N} W_y(j)I(x-i,y-j) \right]$$

Dense Connectivity

• Each module concatenates its input and new learned features together to form final output. [Gao et al.]

•
$$y_m = [H_m(y_{m-1}), y_{m-1}]$$

• Gather multi-scale information together.

Downsampling Block

- Two modes.
- Win > Wout (Wconv = Wout)

Input

[1]

• Win < Wout (Wconv = Wout - Win)

(3, 15) (15, 60)

Downsampling

Downsampling Block

[1/2]

(60, 260)

EDA Block 1

[1/4]

[1/8]

[1/8]

[1/8]

Downsampling Block

- Pros: Enable network to have larger receptive fields.
- Cons: Lose spatial information.

(3, 15) (15, 60)

Downsampling

m

Downsampling Block

[1/2]

Input

[1]

(60, 260)

EDA Block 1

[1/4]

Decoder

- No decoder.
- Use bilinear interpolation to recover resolution.

Ablation Study

- Core module
- Extra context module
- Decoder
- Downsampling Block

Cityscapes Dataset

- Class: 19
- Training data: 2975
- Validation data: 500
- Test data: 1525
- Resolution: 1024 x 2048

Conclusion

- We develop a novel network named EDANet, which incorporates asymmetric convolution with dilated convolution and dense connectivity. It can run on high-resolution images at 108 FPS on a single GPU and achieve 67.3% mIoU on the Cityscapes dataset.
- EDANet is nearly 3 times faster than ICNet and attains comparable performance; it achieves this without any extra decoder structure, context module, post-processing scheme, and pretrained model.
- We design various types of EDANet variants to analyze the performance of different network architectures and analyze the reasons behind the results.

Thanks for your attention
